Interaction Photo Gallery guide line instruction.

The gallery is designed to be responsive, adjusting its layout based on the screen size. This means the gallery will look good on both desktop and mobile devices.

When you load the webpage, you'll see a collection of images arranged in a gallery layout. Each image is displayed as a smaller thumbnail.

All images displayed in the gallery are interactive, meaning each can be clicked to view a larger version.

As you hover over an image, it will slightly scale up (if CSS hover effects are implemented), indicating that the image is clickable.

Once an image is clicked, the screen will show the enlarged version of the image, allowing you to view it in more detail and some picture description.

By following these instructions, users can effectively navigate and enjoy the interactive photo gallery.
